Abstract of FR 2665079 (A1)

The syringe comprises a body (1), a needle (2) which can be fitted on the body (1), and a protective cap (3) which can itself be fitted on the needle (2). The rear end-piece (6) of the needle (2) is provided with a portion of internal threading (8) and a portion of external threading (9), of the opposite pitch. The portion of complementary threading (5) formed on the outlet end-piece (4) of the body (1). The portion of external threading (9) cooperates with complementary screwing means (10) formed in the inside of the cap (3). The needle (2) is thus protected not only before use but also after use.
